PowerHold® Automatic Vehicle Restraint

Poweramp® Company recently introduced the PowerHold® vehicle restraining system in zinc plating. The zinc plated housing and zinc dichromate plated restraint arm makes PowerHold highly resistant to corrosion from weather and dirty dock environment. The PowerHold restraint system includes the restraint mechanism, full feature controls, inside and outside light communication package, and signage. The PowerHold restraint is hydraulically powered. The unit seeks and finds the rear impact guard (RIG) of the trailer, then applies continuous pressure to firmly restrain the vehicle during the loading and/or unloading process. The PowerHold restraint is sold as a stand alone product or can be integrated into your loading dock operation.

Systems Incorporated® is a manufacturer of Poweramp, McGuire®, and DLM hydraulic and mechanical dock leveling equipment. Systems, Inc. also provides complete loading dock solutions, including vertical storing levelers, truck restraints, truck levelers, bascule bridges, dock seals and shelters, dock lights, overhead doors, communication packages, control panels, safety barriers, and maintenance/service packages. For more information on Systems Incorporated® and its products call 1.800.643.5424.
